	Back Office Software	
	3rd Party Systems	

Redundancy is the Key...

The XCR Pyramid Management Technology (PMT) ensures that the ECRs attempt all efforts as to stay on line, reducing a single point of failure (truly stand alone).

Sales Data is replicated across multiple masters as to ensure data integrity in the event an ECR goes off line

In the event of an ECR going off line, the ECR will switch into full **standalone** mode until it comes back on line
